

## Project Objective

The overall purpose of this project is to improve regional preparedness for the increasing frequency, intensity, and impact of water-related climate shocks on people, livelihoods, infrastructure, and ecosystems in select countries of Eastern and Southern Africa with the assistance of regional organizations, to respond promptly and effectively.

## A SMALL CHANGE MAKES A BIG WORLD

## Project Component

The Project is conceived as Series of Projects (SOPs), structured around several components, including:

### Improved Water Management

The project focuses on improving water resource management for agricultural and domestic use.  
It's all about smart water.

### Enhanced Climate Monitoring

Investing in system for better climate monitoring and early warning. This helps to prepare communities.

Stay informed.

### Resilient Infrastructure

Building Infrastructure that can withstand climate shocks, like floods and Drought.

Durable Solution.

## Building Resilience Together

The Project helps Communities in Africa cope with climate Change by improving water management and Preparedness.
